Thank you for buying our animation pack!

This is version 2.0 of the Ultimate Traversal pack. We have fixed the animation import warnings in this update by replacing the rig. You can still find the old versions of the animations in the folder marked “legacy” if you wish to continue using those.

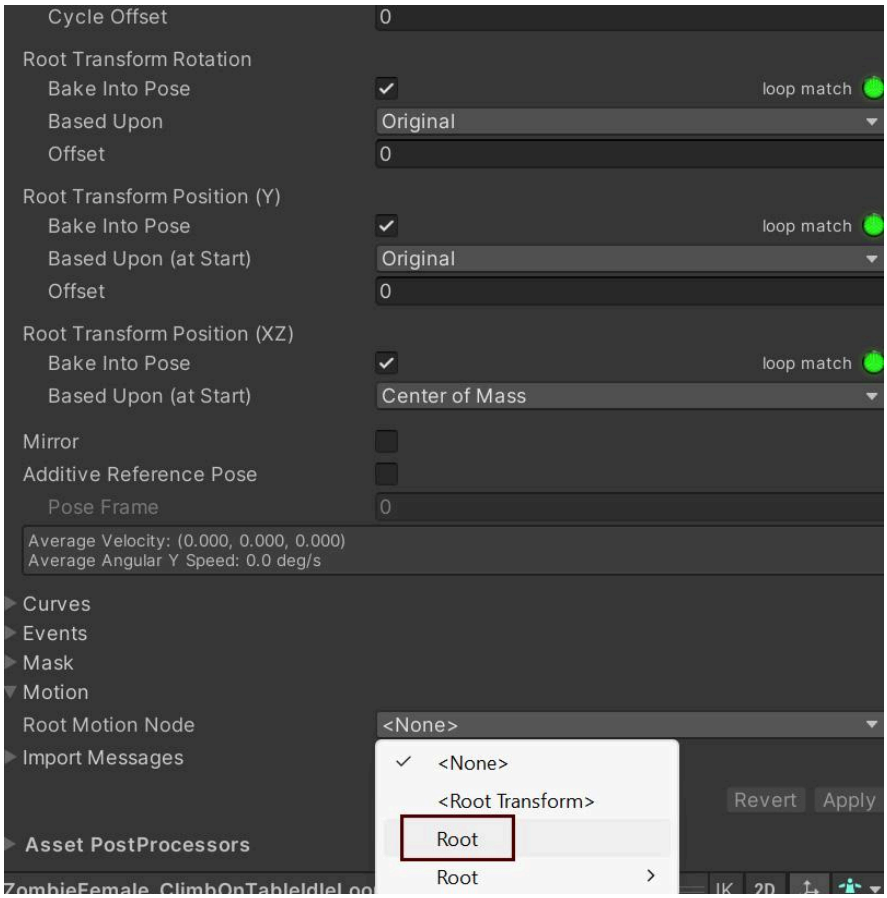

Q: How do I use root motion?
OR the animation is looping in place, how do I fix it?

A: Uncheck “Bake into pose” in the animation settings and make sure “use root motion” is checked for the character.

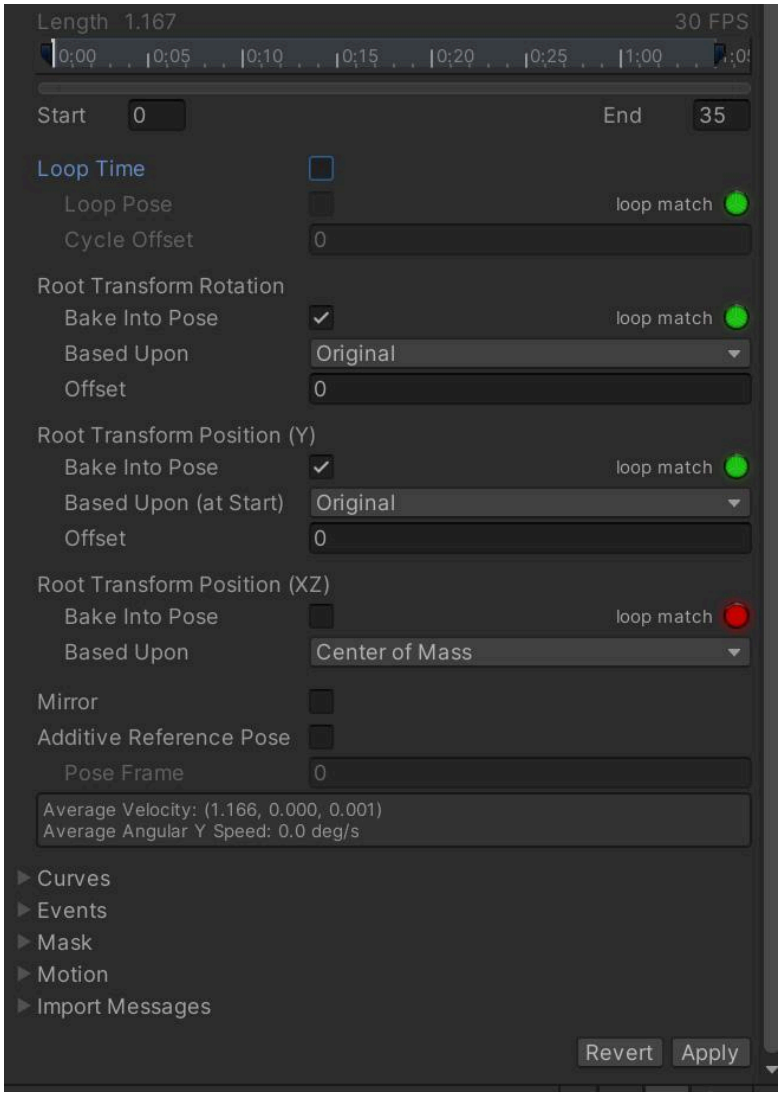

You may need to make adjustments to the animation settings depending on your specific needs, but these settings should generally work.

Or, you can select the “motion” dropdown at the button of the animation tab and set the “root motion node” to “root” This will disable the bake into pose options and have the character just use root motion.

Q: How do I use the animations in place?

A: This pack contains in place versions of most of the included animations. You can find those in the folder marked “InPlace”. If you wish to adjust a root motion animation to be used in place, you can adjust the settings as follows: check “bake into pose” for root transform rotation and root transform position (y). Uncheck it for Root Transform Position (XZ).
